FRE-CLI-Prototype

Prototype of future FMS Runtime Environment (FRE) CLI using Python's Click Lib

Usage

- Need to set up virtual environment first and foremost
    - going to need conda or venv for python
    - need to install:
        - click
        - setuptools
    - using `setup.py`, must ensure that it is written in accordance with `fre.py` and `pip install --editable .` (these instructions are better explained in `/pdf_guides/Setuptools Integration -- Click Documentation (8.1.x).pdf`)
        - this will allow `fre.py` to be ran with `fre` in the command line instead of `python fre.py`
    - must create a new virtual environment after this step to use changes
- Enter commands and follow `--help` messages for guidance
