Ideas for Implementation:

Helpful Click Decorators & Utilities

- click's `--help` option will be ideal for users
- click.option(): this will be very useful for flags that may be used
  - will be able to use commands like `is_flag`, `flag_value`, `count`, `help`, etc.
- click.group(): this will allow FRE to be broken up into parts and subparts for each part
  - will be able to use commands like `add_command`
- click.progressbar(): potential for the user to see progress while something runs like `fre run`
- click.confirm(): potential for the user to verify actions and proceed
- click.style(): can style text with wanted configurations if needed (can use click.secho())
- click.pause(): stops executing current command and waits for user input to continue
